

Portable Ticket-Vending System

Höft & Wessel has added an important new component to the new public transport sector product family. The **almex.MT** portable terminal is a mobile ticket-vending machine which has been developed specifically for use by sales staff in trains and busses. In the development of the **almex.MT** all necessary and relevant features for mobile vending were compressed so as to achieve optimum efficiency with the lowest possible volume, weight and price. The unit was tested over many years of operational trials on the German National Railways (Deutsche Bahn AG) and then optimised on the basis of the experience obtained.

The **almex.MT** also contains all peripheral components which might be valuable to the user. Apart from the high-speed ticket printer, readers for magnetic cards and bar codes have also been integrated into the unit. The sales staff cash up using a data card developed by Höft & Wessel specifically for sales applications that have to be protected against fraud.

The unit is operated by 44 mechanical alphanumeric keys and 12 soft keys controlled by the application program. Their function is displayed on the large-area, readily legible graphics display. Operator guidance has been specially optimised for fast selling.

Technical Data

- Fast 32-bit processor, up to 48MB static RAM or 128MB Flash EPROM
- DataCard for storing sales data
- Graphics display: Resolution 128 x 128 pixels
- Keyboard with 44 keys and 12 soft keys
- Fast ticket printer with ticket number recognition; paper roll diameter: 38mm
- Integral magnetic card push-through reader (Tracks 1-3)
- Integral bar-code push-through reader
- Fast data interface (ARCnet network) with infrared coupling
- Compact and efficient rechargeable battery (1.2 Ah) for long operating life
- Dimensions: 114 x 328 x 51 mm (w x h x d)
