

Universal Ticket Kiosk

ALMEX

A trademark of Höft & Wessel

For payment, ticketing and more

The stationary self-service terminal from Höft & Wessel is both a ticket machine and an information terminal with various payment functions, as well as a choice of additional optional functions for a wide range of applications. In short, this powerful multi-media information system offers maximum functionality on a minimum footprint.

Design and Comfort

The terminal offers high technology and the highest utility in a retro-look, easily customisable to any corporate design. The user interface, which can be multilingual as required, consists of a large high resolution TFT graphic display with a touch-sensitive screen. Using an intercom system the customer can be assisted from a call centre. Input and output slots are arranged in an ergonomic layout. This, together with a tilted display, offers optimal comfort to the user.

Handling

Service-friendliness is a key feature of the Universal Ticket Kiosk. The push-up cover provides easy access to the inside of the machine. The printer module and paper supply are housed in a drawer, making them easy to reach. This simplifies maintenance and paper handling. For setting the kiosk up there is a choice of three different mountings.

Payment Methods

Cashless payment can be made by credit card, customer cards or ec-Cash. For cash payment we can offer a DECT radio connection to an optional till.

Printer Technology

The integrated printer issues tickets with an encoded magnetic strip which can be subsequently processed electronically. The terminal of course has both ticket park and retract functions.

Communication

The ticket kiosk can be equipped with various communications modules, for example to connect online to the company's HQ. The choice of communication methods includes Ethernet, DECT or ISDN.

Questions ?

We would be delighted to help you design your own solution.

Technical Data

Operation

- TFT Design
- Touch-sensitive coated 15 inch touchscreen
- High resolution colour screen, with 1024 x 768 pixels
- Protected with toughened security glass and a buffer layer
- User guidance by colour LEDs to indicate inputs and outputs
- Acoustic support, via two integrated loudspeakers

Printer

- Electronically readable tickets with magstripe encryption
- Copy protection and error-tolerant coding system for magstripes
- 200dpi, 100mm/s
- Ticket holders for 2 x 2000 tickets
- Ticket park and retract functions
- Reliable mechanics with a completely closed paper path

Payment methods

according to equipment supplied:

- Cashless with credit cards, customer cards or ec-Cash with PIN number entry

- Cash payment from additional till module

PIN pad

- PIN pad module with its own display and keypad
- Stainless steel front, protected from vandalism
- Countersunk for security

Hybrid card reader

- Dip reader with decrementing facility
- Reading and writing of chip cards and magstripes (DIN 7816 and DIN 7811)

Housing

- Stainless steel, coloured according to customer requirements
- Service friendly, compact construction with push-up cover
- Size: 460 x 1400 x 500 mm (W x H x D)
- User area made from HSF 20, painted

Computer

- Standard PC components housed in an industrial stainless steel housing, offering future proofing and extendibility

Power Supply

- 230 V
- Integrated Uninterruptible Power Supply
- Temperature control
- Door contacts

Communication

- set up as required:
 - ISDN card for PC
- Data transfer via integrated DECT module
- Network connection, e.g by Ethernet
- Intercom system with choice of language
